Test of the entire house protection against electromagnetic radiation by the ProtectPro Smart Defender SD9-50

Coverage 150ft in radius 300 ft in diameter.

The BESA Institute of Austria
has scientifically tested all products made
by IPC Europe Norbert Heuser
and submitted more than 1500 pages in total
of testings procedures, test results and certificates.
All IPC products passed testings and have been certified.

In this case BESA tested if the
IPC Product Smart Defender SD9-50
will protect a person in a home from
electromagnetic radiation / WiFi.

The original BESA document of this series of testing
covers 21 pages.
Following is an extract of that testing procedure.

BESA analysis of all
the relevant bodily
functions and processes.

All values below 50
show are in **blue** and are degenerative.

All values 50 to 70
are in **green** and represent
the state of desirable and normal.

The first analysis
as below shows the state
of the person tested
while being exposed to
electromagnetic radiation in her home.

are degenerative and show in **blue.**

Then IPC product
SMART DEFENDER SD9-50
brought into the apartment and left there.

37 hours later a new test was carried out.
All values went
up into the **green** area = healthy.

See the results as follows.

was taken out of that apartment again.

Only 2 hours later a new

analysis was carried out.

All values went straight back down again

into the **blue** zone = degenerative.

See results as follows.

yellow: high reads more than 70

blue: low reads less than 50

green: normal reads between 50 & 70
